Summary

Software Engineer with **6+ years** of experience designing, developing, and deploying **100+** microservices, web applications, APIs, and features from scratch.

Experience

Bengaluru, India

Lowe's | Software Engineer

Dec 2025 - Present

- Architected and implemented the modernization of legacy systems into a distributed Java/Python data integration platform, eliminating proprietary dependencies and saving **\$10M** annually in software license fees.
- Built Kafka consumers and PySpark data pipelines for the data integration platform, processing **20M+** events per day, and tuned consumer performance for **3x** higher throughput and lower processing lag.
- Built an AI agent using MCP that pulls CVE vulnerabilities from the Snyk API, applies fixes to affected services, and opens pull requests for review, cutting remediation effort from a day to minutes.

IBM | Software Engineer | Lowe's DIP Applications

Jun 2024 - Dec 2025

- Built real-time data pipelines from scratch using Java, Kafka, and databases, processing **2B+** records while reducing latency by **90%** with scalable architecture.
- Led Spock & Groovy testing framework adoption for microservices, improving code quality by **30%**, cutting bugs by **25%**, and guiding team rollout.

TCS | Software Engineer | Digital Services Applications:

Oct 2020 - Jun 2024

- Implemented autocomplete search on the UNFI website and optimized Elasticsearch queries, cutting response time by **50%**, increasing search-to-sale conversion by **14%**, and boosting sales by **12%**.
- Developed and scaled **12** core REST APIs for store and product data, handling **10K+** daily calls, and designed the DSD and catalog database, reducing read and write time by **60%**.
- Designed price calculation feature, enabling updates for stores, adopted by **50%** of stores.

Supply Chain Application:

- Increased the overall efficiency of **six** applications by **4x** by **rewriting** the old Tibco services in Java and Spring Boot microservices, leveraging Spring Batch and Integration.
- Created a reusable Bulk API V2 client component for Salesforce data/file transfer, achieving a **50%** increase in throughput and a **3x** efficiency gain.
- Improved the response time by **30%** by adding caching and restructuring the API and query.
- Implemented real-time application monitoring, metrics, and alerting using Grafana, decreasing application downtime by **80%**.
- Designed and built an Edeals feature with a React UI for Excel deal uploads, adopted by **1000** users weekly, increasing daily deal creation by **20%** and uploads by **60%**.

Skills

Languages: **Java, Python, JavaScript, C/C++**

Frameworks: **Spring Boot, PySpark, React, HTML, CSS**

Technologies: **MySQL, Redis, Elasticsearch, Kafka, AWS, CI/CD**

Tools: **GitHub, Linux, Docker, Kubernetes, Grafana, JMeter, MCP, AI Agents**

Concepts: **DSA, AI, OS, DBMS, OOP**

Education

B.Tech in Computer Science and Engineering

Aug 2016 - Jul 2020

Bengal College of Engineering and Technology, Durgapur

CGPA - 8.93
